

**Says**

⭐ Inventory management systems control the process of managing all incoming and outgoing
⭐ products in a retail store or online. An inventory management system reduces time on stock
⭐ management tasks such as cycle counts, physical inventory, and manual refill calculations.

**Thinks**

⭐ Inventory management software helps businesses control
⭐ inventory levels and order fulfillment.
⭐ There are many components of inventory management
that the software enables users to track and optimize

**Does**

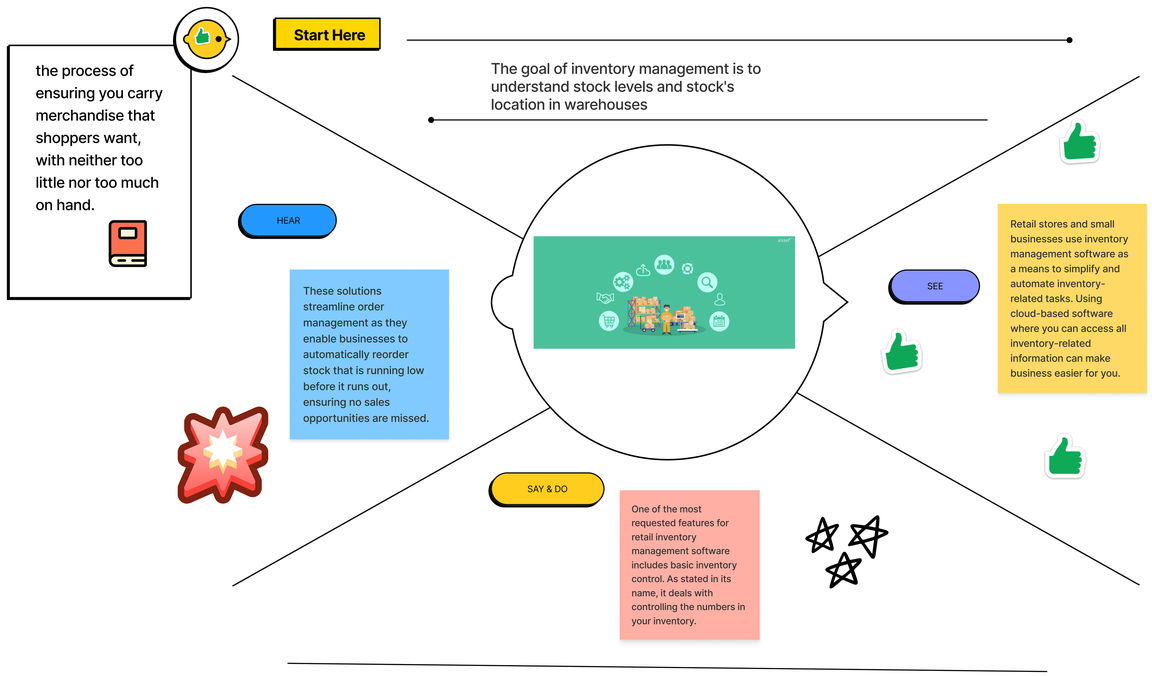
⭐ Retail inventory management works by creating systems to log products, receive them into inventory, track changes . when sales occur,manage the flow of goods from purchasing to final sale and check stock counts.

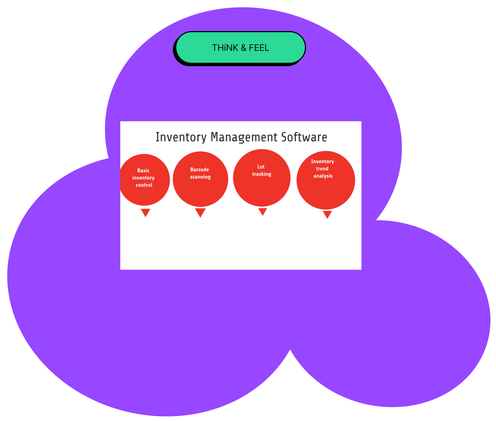
**Feels**

⭐ Safety stock is inventory just in case if something happens that hampers the delivery of goods next, so the inventory remains there for some time to come.

**Pain**

Poor inventory visibility. This is one of the biggest challenges in inventory management.....

**Gain**




As its name declares, point of use inventory is that which is stored at the very location where it will be used. Instead of keeping inventory in a warehouse or other secondary location until it needs to be shipped to its user, it is kept at the point of use.
